

### FAMILYSEARCH.ORG CASE STUDY

**Merlin Carpenter and Tim Stokes** 

SOFTWARE DEVELOPMENT

CONFERENCE

gotocon.com

# FamilySearch

- World's largest genealogy organization
- In operation more than 100 years
- Non-profit
- Owned and funded by the Church of Jesus Christ of Latter-day Saints

# FamilySearch Mission

To rediscover

and preserve a knowledge of

the family relationships of all humankind

- Granite Mountain Records Vault
  - granite walls 200meters thick
  - climate controlled interior

- Granite Mountain Records Vault
  - 2+ million rolls of microfilm
  - -3.6 billion images
  - records from 100+countries (e.g. Denmark:97,068 rolls)

Census

## Link Rot

• The tendency for links on a website to gradually "break" over time.

### Link Rot

Nelson and Allen (2002)
 examined link rot in digital
 libraries found that about 3%
 of the objects were no longer
 accessible after one year.

# Cool URIs don't change

http://www.w3.org/Provider/Style/URI

# "Cultural Memory" Organizations

- Libraries
- Government Agencies
- Universities
- Non-profit organizations
- Etc.

## "Permanent Link" Solutions

- URN
- PURL
- Handle System
- DOI
- LSID
- ARK

# Solving the "Link Rot" problem

- Identifiers. A way to assign identifiers that is independent of location.
- Namespace. A mechanism to subdivide the identifier namespace to avoid collision.
- **Resolver.** A mechanism to "resolve" an identifier to its current location.
- Resolver Maintenance. A way to keep the "resolver" up-to-date as resources change location.

# Two Different Approaches

- Resolve every time
  - Store identifiers
  - When location is needed, ask resolver
- Resolve only when "broken"
  - Syntax embeds identifier in URI
  - Store URI with embedded identifier
  - Use URI until it "breaks", then ask resolver for new URI (with embedded identifier) and store it.

### URI with embedded identifier

Ark example:

# Resolve-when-broken Advantages

- Lower load on resolver
- Resolver is mostly removed from critical path

## PAL

• Syntax:

http[s]://<domain>[<path>]/pal:/<namespace>/<name>

• E.g.

https://familysearch.org/pal:/MM9.2.1/K86M-5H2
